Features	Consumer File Sharing & sync Services	InfoVaultz
Account Management	The employee handles account creation and termination directly with the file sharing service. Corporate IT has no visibility into who has an account and the type of information stored in the service. When an employee leaves the organization, IT has no ability to terminate access to the account.	IT creates/terminates accounts for all users in the organization. With admin control, IT has power to know who has an account and what information is stored in the file service. When an employee leaves an organization, IT can disable the account, or terminate the account, including remote wipe
Access Control	Employee manages access privileges for all data stored in their account. Corporate IT has no control over who access, inside or outside of the company. When an employee leaves the organization, IT has no ability to recover the data.	IT manages user access through integration with AD or LDAP (or manually). Access control policies are consistent with existing corporate infrastructure. IT has full control of access to data regardless of employees coming and going. It can prevent twitter
Remote Management	Users control access to file sharing services from a mobile device. If the device is lost or stolen, the user is responsible for wiping any information.	IT controls user access to files from all devices. Remote management occurs at the device level. IT can restrict access from specific devices and remotely wipe all data if the device is lost or stolen or even if user leaves the company. This include desktops, laptops and mobile devices
Information Security	Content stored in the cloud is accessible by employees of the file sharing service. Customer controlled encryption of data requires acquisition and management of a separate 3rd party application. Location of data is unknown. Terms of service and ownership is in favour of service provider	Data encryption in transit is integrated into the solution. Appliance is stored either locally or in trusted data centers. Full control and security is in the hands of the IT organization. Data policies can always be tracked and Infovaultz as a hardware and service provider has no access or knowledge of your data

InfoVaultz The Secure Private Cloud

Features

Large File Support
No specific file size limitation. Share large GB sized files with users inside and outside your organization.

Storage Types
Supports Local storage (HDD, NAS/SAN), Amazon S3, Opens tack or any object based storage.

Virus Protection
Integrated antivirus functionality to protect your business files

Share
Full control of share, sync, and public link permissions.

Built-In Document Preview
Enables users to view common file formats, including Word, Excel, PowerPoint, PDF and .txt files, inside a web browser.

What does InfoVaultz Replace?

FILE SERVER / NETWORK ATTACHED STORAGE
The "Team folder" feature allows you to create shared areas for different users and teams, just like traditional file server.

BACK UP SOLUTION
Automatically synchronizes your new files on your PC to secure personal area in the cloud. Any changes or new files instantly synchronized. Keeping them safe in case of hardware loss or failure.

FTP SERVERS OR "FILE SHARING SERVICES"
Instantly share any file or folder with anyone using the shareable links. No uploading of files to an FTP or File Sharing type solution. Set password and link expiry dates.

VPN INFRASTRUCTURE
No need to have VPN to access your files. All you need to have is an Internet connection and you can access all your documents in your online storage area from any device.

COLLABORATION SOLUTIONS
The easy to create "Team Folders" allow groups to work on specific files and folders in a controlled read a write environment. Create folders on the fly!
